KCi Services: Dark Web Scan

- This process used to search for stolen or leaked data, such as personal information, passwords, or company details, on hidden parts of the internet. We utilize specialized tools to crawl dark web sites and forums for relevant information related to our clients. The collected data is then analyzed, and a report is generated to inform you of any potential risks and necessary steps.

- This process is crucial because it helps you identify and mitigate risks associated with compromised data before it can be exploited

This will help you:
- Take preventative measures
- Enhance readiness for potential data breaches
- Understand emerging threats
- Detect compromised data before exploitation
