SIEM

**Real time Alerting** · **Log Collection** · **Event Correlation** · **User Activity Monitoring** · **IT Compliance**

KCi Services: SIEM

- SIEM (Security Information and Event Management) is a cybersecurity solution that collects security data and analyzes it from your business' IT infrastructure in real-time. It helps detect and respond to security threats by correlating logs and events from various sources. Additionally, SIEM provides compliance reporting and incident management capabilities.

This solution will provide you with real-time threat detection and response, enhancing your security posture and protecting data.

SIEM will benefit you by:
- Correlating data
- Meeting regulatory security standards
- Improving proactive defense strategies
- Identifying and responding to security incidents as they happen to reduce risk of damage
